Cisco Small Business WRVS4400N Secure, High-speed Wireless-N Gigabit Router

Wireless-N

With Wireless-N (draft 802.11n), the farther away you are, the more speed advantages you get. By overlaying the signals of multiple radios, Wireless-N's "Multiple In, Multiple Out" (MIMO) technology multiplies the effective data rates, increases the range and reduces "dead spots" in the wireless coverage area. The robust signal travels and maintains wireless connections farther and faster.

Gigabit Network Connection

The LINKSYS WRVS4400N features 1 Gigabit WAN port and 4 Gigabit LAN ports to provide up to 10X faster speeds than most 100M network connections and excellent usability for office network.

Wireless Security

The WRVS4400N incorporates advanced firewall and Intrusion Prevention System (IPS) features to secure your network from external threats including worms, DDoS attacks and viruses. The VPN tunnels provide a secure and easy-to-use solution for mobile workers to stay connected and the VPN "gateway to gateway" IPSec tunnels facilitate branch office connectivity through encrypted virtual links.

QoS Features

The integrated QoS features provide consistent voice and video performance on both wired and wireless networks for the deployment of business-quality VoIP and video applications.
